

WHY THIS COURSE?

Nutrition research capacity in India lacks world-class rigour, quality and quantity. By engaging globally-acclaimed experts in nutrition epidemiology, research methods and policy processes, we will expose our participants to the global standards in nutrition research and practice. Using collective experience and expertise of faculty from several leading nutrition and public health institutes in India (like IFPRI, NIN, AIIMS, PHFI, CCDC) and abroad (Emory University), we intend to inspire, empower and connect the professionals of nutrition and allied streams to converge their interests on bilateral, regional and global issues of PHN. Joint projects and publications are anticipated in future based on the networking provided via and beyond this course.

This course would not only serve as an excellent platform for participants to learn and apply nutrition epidemiological principles and concepts but also help them contribute towards teaching and training opportunities.

Public Health Nutrition Research Methods & Policy Course

Public Health Nutrition Research Methods & Policy Course

20th February – 23rd February 2018
New Delhi

COURSE DIRECTORS

Dr Shweta Khandelwal
(Public Health Foundation of India)
&

Dr Aryeh D. Stein

(Rollins School of Public Health,
Emory University, Atlanta, USA)

Organized by

CENTRE FOR CHRONIC DISEASE CONTROL

&

PUBLIC HEALTH FOUNDATION OF INDIA

India currently faces multiple simultaneous forms of malnutrition: undernourishment, rising overweight-obesity and micronutrient deficiencies. Optimal nutrition improves cognitive development and school and work performance, and reduces morbidity and mortality; all these increase the nation's productivity and economic development.

CCDC and PHFI are committed to capacity-building in the area of nutrition. This short course, offered for the past 7 years is a part of their long-term strategy to train a pool of motivated professionals. Didactic and interactive sessions are planned over a period of 4 days to promote participants' capacity to understand the context of nutrition programs and policies in the country and the role of nutrition epidemiology and methods to enable participants to design high-quality research and generate credible evidence.

COURSE DIRECTORS

Dr Shweta Khandelwal,
*Public Health Foundation of India,
New Delhi*

Prof Aryeh D. Stein,
*Rollins School of Public Health,
Emory University, Atlanta GA, USA*

Using collective experience and expertise of faculty from several leading nutrition and public health institutes in India (like IFPRI, NIN, AIIMS, PHFI, CCDC) and abroad (Emory University), we also encourage participants to apply these learned principles to promote public nutrition up the political agenda

Who should apply?

Research professionals from domains of nutrition, public health and life sciences. Students in final phase of their PhDs. Senior representatives from government bodies engaged in policy making or functioning in close association with nutrition and health oriented programs. Senior faculty members engaged as program practitioners, consultants, technical officers in above fields with a minimum of 1-2 years' work experience.
